

ISSUE → CONTROL → PROOF (each row is something a buyer will ask; status is today's truth)					
Issue	Control that solves it (as deployed)	High-level workflow	Status	Proof (evidence file)	
Raw PII reaching the model / the logs	mask_pii (Comprehend) fail-closed + signed sanitized_ref; R3-2 pass-by-reference (raw text only via ingest, refs in workflow state); masked-before-model measured on every model row	ingest → case_ref → mask → sanitized_ref → tools accept only a verifying ref	LIVE	EP1 canary 0 leaks; 111 gate canary; OBSERVABILITY masked_before_model = true	
The agent commits a consequential action by itself	Cedar no_self_commit / no_self_fraud_referral; HumanSignoff (waitForTaskToken) with SoD; approve_signoff single-use; finalize verifies the approval PATH + exactly-once FINAL#	Agent → request_signoff → human approves (different identity) → finalize → FinalizeOk	LIVE	governed-core 1.5.0 live (raw send-task:success refused); demo 29 checks; EP1	
One tenant sees another tenant's data	Tenant derived from the verified identity (interceptor, HMAC pair); per-tenant DataStacks + WORM vaults; route_store fail-closed; require_tenant; mirror IAM scoped to prefix	JWT group → interceptor → signed pair → every Lambda verifies - tenant's physical stores	LIVE	MULTITENANT-E2E 5/5; MULTITENANT-AUDIT 12/12; 111 gate	
Someone edits or deletes the audit trail	DynamoDB hash chain (HEAD# CAS transact) + S3 Object Lock copy + IAM DENY on Update/Delete/retention bypass + CloudTrail data events; correlation keys inside the hash	record_event → transact append + WORM put → verify_chain	LIVE	EP1; OBSERVABILITY-VALIDATION-2026-08-29; MULTITENANT-AUDIT	
"Show me everything that touched this case"	One correlation set on every span, gateway row, Lambda line, model row and WORM record; trace_case.py builds the timeline per tenant	runtime → gateway → tool → WORM, joined by session/trace/request ids	LIVE	OBSERVABILITY 13/13 per tenant; 111 gate	
Runaway spend / "never exceed \$X"	Per-tenant token usage TRACKED live (model log + spans); hard/soft cap meter exists OFFLINE (platform_core); AWS Budgets \$ action NOT BUILT	today: measure per tenant, alert manually; build B1-B5: preflight deny + Budgets action → kill switch	OFFLINE	docs/TOKEN-BUDGETS-AND-COST-CEILINGS.md	
"Stop everything, now, and prove you did"	One SSM flag read FIRST by the interceptor, every tool Lambda and the Runtime (fail-closed, 15 s TTL); engage/disengage via AWS_IAM function URLs — IAM + in-code separation of duties, IAM-verified actor, every change a COMMITTED WORM row, every refusal a DENIED row	engage → 403 at the gateway within one TTL, workflow fails at its next state, running session stops → security lead (different identity) releases	LIVE	AGENTCORE-KILL-SWITCH-2026-09-03 (29/29, 13.9 s); platform Run 11	
The IaC drifts from the claims	MATURITY.yaml single source of truth + drift-checker in CI; hash-pinned governed-core; doc-count gates; account-id scan; release tag = validated tree	commit → CI gates → tag → live gate → evidence → MATURITY	LIVE	all three repos' CI green 2026-09-03; VALIDATED_RELEASE.md
